"What you see, you can understand"

## The sustainable 3D digital twin as the foundation for the future

Fully web-based  
and based on  
international  
open standards

Various applications from  
one interface, such as flood  
analysis

With Clearly.3D-City, we offer an online and scalable 3D Digital Twin solution based on international Open standards. It serves as the foundation for addressing societal challenges.

Our 3D Digital Twin is utilized for various purposes including energy transition, housing challenges, sustainability, and community engagement.

We stand for a 3D Digital Twin and a database based on international Open standards, ensuring data remains at its source.

Our unique approach lies in separating the online platform and data from the application, always prioritizing the customer and collaborating as partners in projects. We work together on societal challenges through use cases and smart, innovative solutions."

# Characteristics and applications

## Distinctive extras

- ✓ Always accessible online, anytime and anywhere
- ✓ Based on international Open standards
- ✓ A scalable and flexible solution
- ✓ Completely free from vendor lock-ins
- ✓ Extensive experience in both national and international markets

## Single capture, multiple uses

It sounds logical, but in reality, it happens far too little. By collecting data once and storing it in a central database, the data can be used for various issues and applications.

This way, the data can flow to different applications based on the challenge for a detailed analysis on topics such as;

- Urban development
- Climate
- Mobility
- Crowd management
- Water management
- Health

We help organizations in their 3D transition and provide the knowledge and tools to make it possible to acquire information "once" and then use it multiple times.

Our customers: municipalities and provinces

Gemeente  
Rotterdam

Den Haag

GEMEENTE TILBURG

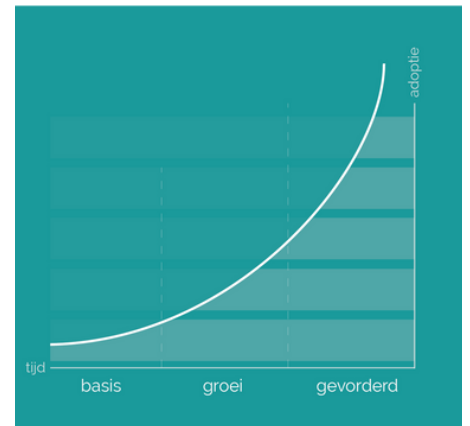

## Our offer

### Strategy, acceptance, utilization and understanding

In our experience, you need to take steps on several fronts if you want to move forward with the topic of 3D Digital Twins in your organization. Both on acceptance, understanding and utilization you need to invest. Only then can you continue to grow and adopt 3D within your organization. Therefore, we have several options for you to get started if you want to take a step with 3D Digital Twins

Basic (from 500,- euro p/m)	Growth (from 2,500 euros p/m)	Advanced (from 5040,- euro p/m)
<p>3D transition, digital twins, digitalization, are terms that are increasingly common. But what exactly is a Digital Twin and what can you do with it?</p> <p>In our basic model we help you in gaining knowledge, experience, inspiration based on a use case. In this way, we will together take the first steps into the world of the 3D Digital Twin.</p>	<p>If you already have some experience and are no longer at the start, we will jointly take the next steps towards managing the Digital Twin independently. For example, consider a two-day session for determining an organization-wide vision supported by concrete use cases. The independent creation of new viewers fed with the right data is a next step in the growth process.</p>	<p>Is 3D already a familiar concept and do you want to incorporate and set up the management yourself? Then you can purchase a 3D-city full license that gives you your own planner, publisher and warehouse. Still in the cloud but fully equipped for your organization.</p>
